Inside Address

Dear Representative/Senator) (State/Federal?)

I am writing to urge you to act immediately on the Climate Crisis we are currently experiencing state-wide, nation-wide and world-wide.

We are already experiencing many of these devastating consequences of our failure to act. Annually, we are experiencing days of “record-breaking” temperatures, making oppressive and deadly heat waves the new normal. Wildfires ravish thousands of acres each year, killing people, animals and ecosystems. Severe, crop-killing drought continues to reduce food supplies and inflate prices. Unprecedented flooding destroys roads, bridges, and family homes. Flooding is also reclaiming many acres of land annually in Gulf of Mexico and East Coast states. Drinking water supplies are at-risk. Billions of sea creatures have been boiled alive in coastal waters. We are told, each year to expect more severe hurricanes due to warmer waters, and immigration from Central American Countries is largely fueled by excessive drought and crop failure in those regions. Asthma, allergies, and food and water-borne diseases are increasing in the U.S. and world-wide.

It is evident that the climate crisis is all-encompassing! In Texas, specifically, our power grid must be fixed immediately, using new technologies that support a cleaner environment.

Finally, as a committed Christian, I am asking you to consider not only what we are doing to our economy, our food supplies and our own health. I am asking you to consider the impact on God’s creation, which God loves. We have a divine-given *responsibility to be good stewards of this planet* and consider not only our own self-interests, but also the interests of our children, grand-children, and generations to come. Please...extend your priorities to include this critical and immediate crisis, and take action based on fact and the best interest of all creatures on earth.

We cannot wait to act. We simply do not have the luxury of more time!

Sincerely,

Name
